DETAILED ACTION

Drawings

The subject matter of this application admits of illustration by a drawing to facilitate understanding of the invention. Applicant is required to furnish a drawing under 37 CFR 1.81. No new matter may be introduced in the required drawing.

Double Patenting

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 1-5 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-9, 1-9, and 1-7 of U.S. Patent No. 6,634,961, 6,602,941, 6,596,801. Although the conflicting claims are not identical, they are not patentably distinct from each other because the present application and the patents listed above claim golf balls comprising a solid core, an inner cover layer, and an outer cover layer. The solid core comprises a base rubber (a) a polybutadiene

having a cis-1,4 content of at least 60% and a 1,2 vinyl content of at most 2%, having a viscosity η at 25 C as a 5 wt% solution in toluene of up to 600, mPa*s and being synthesized using a rare-earth catalyst (b) a diene rubber other than component a (c) unsaturated carboxylic acid or metal salt (d) organosulfur (e) inorganic filler and (f) peroxide. The claimed ranges of the present invention overlaps the ranges claimed in the patents. Varying ranges is within the capabilities of one skilled in the art.

Claims 1-5 are provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-5 of copending Application No. 10/635,610. Although the conflicting claims are not identical, they are not patentably distinct from each other because present application and the '610 application claim golf balls comprising a solid core, an inner cover layer, and an outer cover layer. The solid core comprises a base rubber (a) a polybutadiene having a cis-1,4 content of at least 60% and a 1,2 vinyl content of at most 2%, having a viscosity η at 25 C as a 5 wt% solution in toluene of up to 600, mPa*s and being synthesized using a rare-earth catalyst (b) a diene rubber other than component a (c) unsaturated carboxylic acid or metal salt (d) organosulfur (e) inorganic filler and (f) peroxide. The claimed ranges of the present invention overlaps the ranges claimed in the '610 application. Varying ranges is within the capabilities of one skilled in the art.

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.
